

ABOUT ME

I am a recent graduate with a passion for web development, particularly in Frontend using technologies such as Vue.js, Nuxt.js, and Express.js, which I applied extensively in various projects during my studies.

What kind of work do you want?

Although I am just starting out in this field, I am highly motivated to continuously learn and improve. My strong interest in UI/UX design and development makes Frontend the area I am most eager to pursue.

That said, I am also capable of working on the Backend, and I have a growing interest in DevOps and Software Testing, as I believe that understanding the full system architecture helps build better, more reliable software.

SKILLS

Databases : MySQL, MongoDB, DBeaver

Languages : Java, Python, CSS, HTML, JavaScript

Frameworks : Express, React, Next.js, Nuxt.js, Vue.js

Tools : VSCode, Postman, Github, Vercel, Jupyter Notebook

PIPHAT UPACHATAI

Royal Scholarship Students (100%),
Rajaprajanugroh Foundation under
Royal Patronage, Rangsit University

EDUCATION

RANGSIT UNIVERSITY

GPAX : 3.50

College of Digital Technology Innovation,
Department of Computer Science

EXPERIENCE

PROGRAMMER (INTERSHIP)

AI Quant Tech Co., Ltd.

Create a website to collect stock information for analysis and planning stock investments for customers.

PROJECT

GACHA SYSTEM SIMULATION APPLICATION

An application that simulates the operation of a random gacha system.

NFT WEBSITE

A website related to trading, creating, or offering NFTs (Non-Fungible Tokens), which are digital assets that cannot be replaced, such as artwork, music, in-game items, etc., that are on the blockchain.

OCR APPLICATION

An application that uses OCR (Optical Character Recognition) technology, which converts text from images into digital text that can be copied, edited, or stored. It is useful for document work, data management, and various automation systems.

FIX PORT WEB APPLICATION

A web application that collects stock data to analyze and plan stock investments for customers.
